Air Mauritius Live with Upgrade to Latest Version of Mxi Technologies' Standard Airline Solution

National Carrier Expands Operational Functionality with Most Recent Version of Maintenix®

Ottawa, Canada (February TBD, 2010) – Mxi Technologies, the leader in aviation maintenance management software, today announced a successful system upgrade and expansion at Air Mauritius. With this development, the operations of the national carrier are wholly supported by the latest version of Mxi Technologies' Standard Airline Solution. In addition, this seamless upgrade establishes a sophisticated maintenance ecosystem spanning the full airline footprint.

"As the national carrier of Mauritius, our services are key to the economic success of the country. In order to offer our customers the best in terms of price and service, we must ensure that we have the most efficient and effective maintenance organization possible. With this goal in mind, our choice of Mxi Technologies and the Maintenix software was an obvious one. The full Software footprint has been the critical ingredient in putting together our key business processes. This has translated into increased productivity, process improvement and better accuracy within our Maintenance & Engineering operation. Mxi's unparalleled expertise and product capabilities were integral to successfully meeting our objectives for the implementation, including our migration from Maxi Merlin." says Mr. Manoj R K Ujoodha, Chief Executive officer of Air Mauritius.

Beyond exceeding organizational requirements for functionality, the Standard Airline Solution provides Air Mauritius with a proven approach to integrating key business processes and industry best practices into their existing maintenance operations.
